Stack9 Integrations

Connect to almost any database engine or anything with a REST API. Create automation workflows that work at scale. Use our native integration connections to create automation workflows to suit the most complex business processes.

Code when you need it, low-code when you don't

Empower your business to automate using our low-code automation UI or provide full capability to your IT team using traditional development approaches to integrate and automate using the Stack9 integration platform.

Automation design

Handle scheduled triggers, move records in batches or notify systems when records are updated by kicking-off your automation workflow. Make use of our predefined actions, perform conditional actions, run your own custom written action, wait for external events or use distributed computing approaches for performance and reliability.

Connect to any system

Performance

From monthly data syncs to millions of executions. Leverage the power of AWS and Azure computing power for cost-optimised high-performance workloads

Simple debugging

Automation runs are logged for diagnose and troubleshooting. Rerun failing actions and inspect data alongside your settings, making edge cases easy to track down.

Database

Build your own integration

Create integration connectors for your own services, make it easy for your business users. Custom code your own workflow triggers and actions using traditional development approaches, then expose them to business users or use in automation workflows side-by-side by native actions.
